

# National Core Indicators® 2018-19 In-Person Survey (IPS) Report

## Community Inclusion, Participation and Leisure

*People participate in activities in their community and have opportunities to do things that they enjoy in the community.*

What to know about the presentation of Community Inclusion, Participation and Leisure data:

### Charts with un-collapsed weighted NCI average

Here's what [collapsed](#) data are

### State and weighted NCI averages

The number of respondents (N) is not weighted

Here's what [weighting](#) data means for comparisons

### Community Inclusion Scale

One Community Inclusion "scale" was created by combing multiple community inclusion items

Here's how to interpret [scales](#)

## Community Inclusion, Participation and Leisure

Table 1. Went out shopping at least once in the past month (proxy respondents were allowed for this question).....	6
Table 2. Went out on errands at least once in the past month (proxy respondents were allowed for this question).....	8
Table 3. Went out for entertainment at least once in the past month (proxy respondents were allowed for this question) .....	10
Table 4. Went out to a restaurant or coffee shop at least once in the past month (proxy respondents were allowed for this question) .....	12
Table 5. Went out to religious service or spiritual practice at least once in the past month (proxy respondents were allowed for this question) .....	14
Table 6. Participates as a member in community group (proxy respondents were allowed for this question) .....	16
Table 7. Went away on vacation in the past year (proxy respondents were allowed for this question) .....	18
Table 8. Community Inclusion Scale .....	19
Table 9. Able to go out and do the things like to do in the community ('yes' responses only) .....	21
Table 10. Gets to do things likes to do in the community as much as wants ('yes' responses only) .....	23
Table 11. Has enough things likes to do when at home ('yes' responses only) .....	25
Table 12. Gets help to learn new things ('yes' responses only).....	27

## Where do these data come from?

All items in this section were collected as part of the face-to-face survey. Information comes directly from the person receiving services, or for some select questions, from a “proxy” respondent. A proxy respondent is someone who knows the person well (e.g., a family member), proxy respondents may not be a case manager/service coordinator. Items that allow for proxy respondents are noted in the table title.

Read more about why we allow proxy respondents for select questions in the IPS in the Overview chapter of this report.

Items in this chapter are a part of the NCI Individuals Outcomes domain (or topic area) and comprise the “Community Inclusion, Participation and Leisure” sub-domain (a specific area of concern within the domain). The Community Inclusion, Participation and Leisure sub-domain includes items that help determine whether “People have support to participate in everyday community activities”. Read more about NCI domains and sub-domains in the Overview chapter of this report.

## What are “collapsed” data?

Many questions in the IPS allow respondents to answer a question with “middle” response like “maybe”, “sometimes” or “in-between”. The tables in this section present collapsed data. That means that two or more response options are grouped together if they are considered to reflect a positive outcome. The table titles explain which options were grouped.

To see the breakout of responses for each option, please see Appendix C.

## Scales

Scales are used to combine responses from multiple similar questions into one variable. In this way we can measure an overarching concept rather than specific elements of the concept. To create a scale, statistical tests are required to ensure that the multiple items share common properties. Scales were created using factor analysis.

One Community Inclusion scale was produced by using data from four variables; variables related to shopping, errands, entertainment and eating out in the community. The scales were also risk-adjusted. Each scale’s reliability was assessed using Cronbach’s alpha.

The scales had an adequate level of internal consistency and reliability.

## What is weighting and why do we do it?

The NCI averages are “weighted” to reflect the states’ relative population and sample sizes. We created the weights using the state’s number of valid surveys and its total survey-eligible population. This way, a state that provides services to a larger number of people but uses a sample similar in size to other states has a greater influence on the overall NCI average (that is, its contribution is *proportional to its service population*).

Some states—in this survey year, **IN, MN, TX and WI**—intentionally oversampled one or more subpopulations or geographical regions to get more focused insights, so their weights are calculated slightly differently (using the number of completed surveys and service population sizes in each subpopulation or region). You can read more about this in the Methodology section of the Overview chapter.

The number of respondents (N) for each question *is not* weighted.

## Presentation of state and weighted NCI averages

### Averages

State outcomes are shown in descending order of percentage and are categorized as statistically significantly above the NCI Average, within the range of the NCI Average, or significantly below the NCI Average. Statistical significance is taken to be at or below the .01 level. For those states that fall within the NCI Average range, their ‘always’ or ‘yes’ response was not statistically different from the NCI Average.

Tables that show significance also break out average results for each state by the type of residence: ICF/IID or other institutional settings, group residence, own home, parent/relative’s home, foster or host home. Figure A on the following page shows, by state, the percentage of people surveyed in each residence type. Please note though that:

- Significance testing was not performed on the breakouts by residence

- The number of people in each residential setting is often too small to allow for valid state-to-state comparisons
- And in many cases, statistically valid conclusions cannot be drawn about differences in results between residence types

Still, we provide this information for states' internal purposes. It should not be used to compare one state with another.

To protect people's privacy, we do not show the data when fewer than 20 people from a state or residence type responded to a question (though their responses are included in the NCI average).

Figure A. Percentage of people surveyed in each residence type by state
