What is NCI?

The National Core Indicators (NCI) program is a voluntary effort by state developmental disability agencies to track their performance using a standardized set of consumer and family/guardian surveys with nationally validated measures. The effort is coordinated by the National Association of State Directors of Developmental Disabilities Services (NASDDDS) and the Human Services Research Institute (HSRI).

In 2018-19 a total of 46 states, the District of Columbia and 22 sub-state entities participated in NCI.

Where are the statistics in this report from?

This report includes findings from the National Core Indicators™ 2018-19 Child Family Survey (CFS). The data shown are weighted NCI averages. These data are comprised of 14,816 valid surveys collected across 12 states: AZ, CA, CO, LA, MN, MO, NC, OH, OR, SD, WA and WI.

What is the NCI Child Family Survey?

The NCI Child Family Survey is used to gather data on family outcomes. It is mailed to families who have a child¹ who *lives with* the respondent and receives at least one service other than case management from the state DD agency. The survey collects demographic information on both the child receiving services ('child') as well as the person who fills out the survey (the 'respondent') and information on services and supports received. The survey is continually refined and tested to ensure it is valid and reliable.

Important note on responses: All data are reported by the respondent based on their understanding of their child's demographics, diagnoses and personal characteristics.

What is included in this report?

This report includes this state's Child Family Survey data compared to the NCI Average. State outcomes that are significantly higher or lower than the NCI Average are indicated with an arrow:

1. Outcomes where the state is significantly above the NCI average are denoted with an up arrow ▲;
2. Outcomes where the state is significantly below the NCI average are denoted with a down arrow ▼.

Significance is based on "Always" or "Yes" response.

The charts in this document, grouped by subdomain, display the state results alongside the average across states (NCI average). The charts are followed by accessible tables containing the same information.

To find out more about the development of the Child Family Survey, data analysis and state samples, check out the National Child Family Report: <https://www.nationalcoreindicators.org/resources/reports/#reports-family-survey-final-reports>.

¹ A Child Family Survey could be completed for an individual up to 22 years if still receiving "child" services.
