## Sampling

Each state is instructed to attempt to complete surveys with a random sample of individuals over the age of 18 who are receiving at least one publicly funded service besides case management. States must complete surveys with a sample that meets the 95% confidence level and +/- 5% margin of error based on the total eligible population in the state. A sample size of 400 guarantees valid comparisons to be made across states with a 95% confidence level and a margin of error of +/- 5%, no matter how large the service population size. A 95% confidence level and a margin of error of +/-5% is mandatory for each state's sample to be included in this report. Most states sample more than 400 individuals to account for refusals and surveys that may be deemed invalid.

Below are included detailed sample information regarding populations states included and excluded from their sample.
