Table 1. Likes home or where lives	7
Table 2. Wants to live somewhere else	9
Table 3. Has enough things they like to do at home	11
Table 4. Likes paid community job (if working in a paid community job).....	13
Table 5. Wants to go out shopping more, less or the same amount as last month	15
Table 6. Wants to go out for entertainment more, less or the same amount as last month.....	17
Table 7. Wants to go out to a restaurant or coffee shop more, less or the same amount as last month.....	19
Table 8. Wants to go out to a religious service or spiritual practice more, less or the same amount as last month.....	21
Table 9. Person wants to be a part of more community groups	23
Table 10. Satisfaction with community inclusion scale.....	24
Table 11. Likes how they usually spend time during the day	26
Table 12. Has used telehealth for healthcare services and like using it	28
Table 13. Has accessed services and support using video conference technology and like using it	30
Table 14. Have talked with their case manager using video conference technology like using it	32

Where do these data come from?

All information in this section comes directly from the person receiving services, or for some select questions, from a “proxy” respondent. A proxy respondent is someone who knows the person well (e.g., a family member), proxy respondents may not be a case manager/service coordinator. Items that allow for proxy respondents are noted in the table title. Read more about why we allow proxy respondents for select questions in the IPS in the Overview chapter of this report.

Items in this chapter are a part of the NCI-IDD Individuals Outcomes domain (or topic area) and comprise the “Satisfaction” subdomain (a specific area of concern within the domain). The Satisfaction sub-domain includes items that help determine whether “People are satisfied with their everyday lives – where they live, work, the supports they receive, and what they do during the day”.

Read more about NCI-IDD domains and sub-domains in the Overview chapter of this report.

What are “collapsed” data?

Many questions in the IPS allow respondents to answer a question with “middle” response like “maybe”, “sometimes” or “in-between”. The tables in this section present collapsed data. That means that two or more response options are grouped together if they are considered to reflect a positive outcome.

To see the breakout of responses for each option, please see Appendix C.

Scales

Scales are used to combine responses from multiple similar questions into one variable. In this way we can measure an overarching concept rather than specific elements of the concept. To create a scale, statistical tests are required to ensure that the multiple items share common properties. Scales were created using factor analysis.

One Satisfaction with Community Inclusion composite scale scores were produced by adding and averaging Community Inclusion items. The items include satisfaction with how often respondents go shopping, out for entertainment, out to eat, attend religious or spiritual services, as well as their satisfaction with the level of community group participation. Each scale’s reliability was assessed using Cronbach’s alpha. The scales had an adequate level of internal consistency and reliability.

What is weighting and why do we do it?

The NCI-IDD averages are “weighted” to reflect the states’ relative population and sample sizes. We created the weights using the state’s number of valid surveys and its total survey-eligible population. This way, a state that provides services to a larger number of people but uses a sample similar in size to other states has a greater influence on the overall NCI-IDD average (that is, its contribution is *proportional to its service population*). You can read more about this in the Methodology section of the Overview chapter.

The number of respondents (N) for each question is *not* weighted.

Presentation of state and weighted NCI-IDD averages

Averages

For the most part, the state outcomes are shown in descending order of percentage and are categorized as statistically significantly above the NCI-IDD Average, within the range of the NCI-IDD Average, or significantly below the NCI-IDD Average. Statistical significance is taken to be at or below the .01 level. For those states that fall within the NCI-IDD Average range, their 'always' or 'yes' response was not statistically different from the NCI-IDD Average. Other tables show the states listed in alphabetical order and are not tested for significance.

Tables that show significance also break out average results for each state by the type of residence: ICF/IID or other institutional settings, group residence, own home, parent/relative's home, foster or host home. Figure A on the following page shows, by state, the percentage of people surveyed in each residence type. Please note though that:

- Significance testing was not performed on the breakouts by residence
- The number of people in each residential setting is often too small to allow for valid state-to-state comparisons
- And in many cases, statistically valid conclusions cannot be drawn about differences in results between residence types

Still, we provide this information for states' internal purposes. It should not be used to compare one state with another.

To protect people's privacy, we do not show the data when 20 or fewer people from a state

or residence type responded to a question (though their responses are included in the NCI-IDD average).

Important Note on Changes to the 2021-22 Survey Tool

NCI regularly updates survey tools to ensure the current set of indicators meet the needs of state systems and reflect current needs in the field. Survey changes are guided by state managers, people with disabilities, and other experts in the field. The 2021-22 survey tool reflected changes based on this guidance and additional survey testing. Throughout this report, new questions and questions that were modified are noted. Please note, any changes to the survey tool may affect comparison to previous years' data, therefore any cross-year comparison should be made with caution.

The scale includes the following items:

- Person is satisfied with how often they went on shopping in the past month
- Person is satisfied with how often they went out for entertainment in the past month
- Person is satisfied with how often they went to a restaurant or coffee shop in the past month
- Person is satisfied with how often they went to a religious service or spiritual practice in the past month
- Person is satisfied with the level of community group participation

Do you like how you usually spend your time during the day?

Table 11. Likes how they usually spend time during the day
