*Introduction*

**What is NCI-IDD**

The National Core Indicators® – Intellectual and Developmental Disabilities (NCI®-IDD) is a voluntary effort by state developmental disability agencies to track their performance using a standardized set of consumer and family/guardian surveys with nationally validated measures. The effort is coordinated by the National Association of State Directors of Developmental Disabilities Services (NASDDDS) and the Human Services Research Institute (HSRI).

In 2021-22, a total of 48 states, the District of Columbia and 22 sub-state entities participated in NCI-IDD.

**Where are the statistics in this report from?**

This report includes findings from the National Core Indicators 2021-22 Adult Family Survey (AFS). The NCI-IDD averages data shown are weighted. These data are comprised of 11, 989 valid surveys collected across 12 states: Alaska (AK), Arizona (AZ), California (CA), Georgia (GA), Indiana (IN), Louisiana (LA), Missouri (MO), Montana (MT), New Hampshire (NH), Oklahoma (OK), Pennsylvania (PA), and South Dakota (SD).

**What is the NCI-IDD Adult Family Survey?**

The NCI-IDD Adult Family Survey is used to gather data on family outcomes. It is mailed to families who have an adult family member who lives with the respondent and receives at least one service in addition to case management from the state DD agency. The survey collects demographic information on both the individual receiving services ('family member') as well as the person who fills out the survey (the 'respondent') and information on services and supports received. The survey is continually refined and tested to ensure it is valid and reliable.

Please note that while the term "case manager/service coordinator" is used throughout this report, the same role may also be referred to as "supports coordinator" depending on the state.

Important note on responses: All data are reported by the respondent based on their understanding of their family member’s demographics, diagnoses, and personal characteristics.

### **Important note on Impact of COVID-19**

The 2021-22 NCI-IDD Family Survey data collection cycle began July 1, 2021 and ended June 30, 2022. As COVID-19 variants continued to impact communities across the United States, states were impacted in various ways throughout the year. Because the family surveys do not collect information on the date of survey completion, these data cannot fully assess what impact the pandemic had on data collected at different times throughout the year. While these data will serve as an important baseline, and meaningful way for states to understand the overall impact of services on families of individuals being served, these data should be read with caution. To help better understand the overall impact of COVID-19 on families, NCI-IDD added a state optional COVID-19 Supplement to all NCI-IDD Surveys. The COVID-19 Supplement is intended to support the understanding of the experience of people with disabilities and their families at the beginning of the COVID-19 pandemic, and their interactions with services during that time. Last year’s Family Survey COVID-19 Supplement can be found [here](#).

### **What is included in this report?**

This report includes this state’s Adult Family Survey data compared to the NCI-IDD Average. State outcomes that are significantly higher or lower than the NCI-IDD Average are indicated with an arrow:

- Outcomes where the state is significantly above the NCI-IDD average are denoted with an up arrow ▲;
- Outcomes where the state is significantly below the NCI-IDD average are denoted with a down arrow ▼.

Significance is based on “Always” or “Yes” response.

The charts in this document, grouped by subdomain, display the state results alongside the average across states (NCI-IDD average). The charts are followed by accessible tables containing the same information.

To find out more about the development of the Adult Family Survey, data analysis and state samples, check out the [National Adult Family Survey Report](#).
