## **Where do these data come from?**

Most items in this section are drawn from administrative sources. Select items may have been collected during the face-to-face survey, those items are noted in tables.

## **What is weighting and why do we do it?**

The NCI-IDD averages are “weighted” to reflect the states’ relative population and sample sizes. We created the weights using the state’s number of valid surveys and its total survey-eligible population. This way, a state that provides services to a larger number of people but uses a sample similar in size to other states has a greater influence on the overall NCI-IDD average (that is, its contribution is proportional to its service population).

The number of respondents (N) for each question is not weighted.

## **DATA CAUTION!**

Several states had large amounts of missing data or data recorded as “don’t know.” Where 25% or more of a state’s sample had “don’t know” or missing responses, we used an asterisk (\*) to indicate that state’s data should be interpreted with caution as it may not accurately represent the sample or service population.

Tables show states listed in alphabetical order and are not tested for significance.
