Table 1. Has friends who are not staff or family members	8
Table 2. Has best friend (may be staff or family)	10
Table 3. Wants help to make or keep in contact with friends	12
Table 4. Has friends (may be staff or family) and can meet with their friends in person when they want.....	14
Table 5. Has other ways of talking, chatting, or communicating with friends when cannot see them in person.....	16
Table 6. Can see and/or talk with their family when they want (among those who do not live in the family home).....	18
Table 7. Often feels lonely	20
Table 8. Can go on a date or is married or living with partner	22

Where do these data come from?

All information in this section comes directly from the person receiving services, or for some select questions, from a “proxy” respondent. A proxy respondent is someone who knows the person well (e.g., a family member), proxy respondents may not be a case manager/service coordinator. Items that allow for proxy respondents are noted in the table title. Read more about why we allow proxy respondents for select questions in the IPS in the Overview chapter of this report.

Items in this chapter are a part of the NCI-IDD Individuals Outcomes domain (or topic area) and comprise the “Relationships” subdomain (a specific area of concern within the domain). The Relationships sub-domain includes items that help determine whether “People are supported to build and maintain relationships that are important to them”.

Read more about NCI-IDD domains and sub-domains in the Overview chapter of this report.

What are “collapsed” data?

Many questions in the IPS allow respondents to answer a question with “middle” response like “maybe”, “sometimes” or “in-between”. The tables in this section present collapsed data. That means that two or more response options are grouped together if they are considered to reflect a positive outcome.

To see the breakout of responses for each option, please see Appendix C.

What is weighting and why do we do it?

The NCI-IDD averages are “weighted” to reflect the states’ relative population and sample sizes. We created the weights using the state’s number of valid surveys and its total survey-eligible population. This way, a state that provides services to a larger number of people but uses a sample similar in size to other states has a greater influence on the overall NCI-IDD average (that is, its contribution is *proportional to its service population*). You can read more about this in the Methodology section of the Overview chapter.

The number of respondents (N) for each question *is not* weighted.

Presentation of state and weighted NCI-IDD averages

Averages

For the most part, the state outcomes are shown in descending order of percentage and are categorized as statistically significantly above the NCI-IDD Average, within the range of the NCI-IDD Average, or significantly below the NCI-IDD Average. Statistical significance is taken to be at or below the .01 level. For those states that fall within the NCI-IDD Average range, their ‘always’ or ‘yes’ response was not statistically different from the NCI-IDD Average. Other tables show the states listed in alphabetical order and are not tested for significance.

Tables that show significance also break out average results for each state by the type of residence: ICF/IID or other institutional settings, group residence, own home, parent/relative's home, foster or host home. Figure A on the following page shows, by state, the percentage of people surveyed in each residence type. Please note though that:

- Significance testing was not performed on the breakouts by residence
- The number of people in each residential setting is often too small to allow for valid state-to-state comparisons
- And in many cases, statistically valid conclusions cannot be drawn about differences in results between residence types

Still, we provide this information for states' internal purposes. It should not be used to compare one state with another.

To protect people's privacy, we do not show the data when 20 or fewer people from a state or residence type responded to a question (though their responses are included in the NCI-IDD average).

Important Note on Changes to the 2022-23 Survey Tool

NCI-IDD operates on a six-year revisions cycle to regularly ensure the current set of indicators meet the needs of state systems and reflect current needs in the field. Survey changes are guided by state managers, people with disabilities, and other experts in the field. The 2021-22 survey tool reflected changes based on this guidance and additional survey testing. Please note, any changes to the survey tool may affect comparison to previous years' data, therefore any cross-year comparison should be made with caution.

Figure A. Percentage of people surveyed in each residence type by state
