Table 1. Has a primary care doctor or practitioner	9
Table 1b. Percent who have a primary care doctor or practitioner (includes missing and "don't know" responses	10
Table 2. In poor health	12
Table 3. Had a complete physical exam in the past year (routine exam, not a visit for a specific problem or illness)	14
Table 3b. Last physical exam (includes missing and "don't know" responses)	15
Table 4. Had a routine dental exam in the past year	17
Table 4b. Last dental exam (includes missing and "don't know" responses)	18
Table 5. Had an eye exam/vision screening in the past year	20
Table 5b. Last eye exam or vision screening (includes missing and "don't know" responses)	21
Table 6. Had a hearing test in the past five years	23
Table 6b. Had a hearing test in the past five years (includes missing and "don't know" responses)	24
Table 7. Had a Pap test in the past three years (among women 21 and older)	26
Table 7b. Last Pap test (among women 21 and older, includes "not applicable," missing, and "don't know" responses)	27
Table 8. Had a mammogram test in the past two years (among women age 50 and over)	29
Table 8b. Last mammogram test (among women age 40 and over, includes "not applicable," missing, and "don't know")	30
Table 9. Last colorectal cancer screening (among people age 45 to 75)	32
Table 9b. Last colorectal cancer screening (among people age 45 to 75, includes "not applicable," missing, and "don't know" responses)	33
Table 10. Had a flu vaccine in the past 12 months	35
Table 10b. Had a flu vaccine in the past year (includes missing and "don't know" responses)	36
Table 11. Went to the emergency room for any reason to get care for themselves in the past 12 months	38

Table 12. Had an unexpected hospital admission due to dehydration, bowel obstruction, seizure, aspiration,	
or GERD, in the past year4	0
Table 13. Fell and hurt themselves in the past six months	2

Where do these data come from?

Most items in this section are drawn from administrative sources. Select items may have been collected during the face-to-face survey from the person receiving services, or for some select questions, from a "proxy" respondent. A proxy respondent is someone who knows the person well (e.g., a family member), proxy respondents may not be a case manager/service coordinator. Items that may come from administrative records or allow for proxy respondents are noted in the table title. Read more about why we allow proxy respondents for select questions in the IPS in the Overview chapter of this report.

Items in this chapter are a part of the NCI-IDD Individuals Outcomes domain (or topic area) and comprise the "Health" subdomain (a specific area of concern within the domain). The Health subdomain includes items that help determine whether "People have access to and get recommended health services at the recommended frequencies".

Read more about NCI-IDD domains and sub-domains in the Overview chapter of this report.

What are "collapsed" data?

Many questions in the IPS allow respondents to answer a question with "middle" response like "maybe", "sometimes" or "in-between". The tables in this section present collapsed data. That means that two or more response options are grouped together if they are considered to reflect a positive outcome.

To see the breakout of responses for each option, please see Appendix C.

What is weighting and why do we do it?

The NCI-IDD averages are "weighted" to reflect the states' relative population and sample sizes. We created the weights using the state's number of valid surveys and its total survey-eligible population. This way, a state that provides services to a larger number of people but uses a sample similar in size to other states has a greater influence on the overall NCI-IDD average (that is, its contribution is proportional to its service population). You can read more about this in the Methodology section of the Overview chapter.

The number of respondents (N) for each question *is not* weighted.

Presentation of state and weighted NCI-IDD averages

Averages

For the most part, the state outcomes are shown in descending order of percentage and are categorized as statistically significantly above the NCI-IDD Average, within the range of the NCI-IDD Average, or significantly below the NCI-IDD Average. Statistical significance is taken to be at or below the .01 level. For those states that fall within the NCI-IDD Average range, their 'always' or 'yes' response was not statistically different from the NCI-IDD Average. Other tables show the states listed in alphabetical order and are not tested for significance.

Tables that show significance also break out average results for each state by the type of residence: ICF/IID or other institutional settings, group residence, own home, parent/relative's home, foster or host home. Figure A on the following page shows, by state, the percentage of people surveyed in each residence type. Please note though that:

- Significance testing was not performed on the breakouts by residence
- The number of people in each residential setting is often too small to allow for valid state-tostate comparisons
- And in many cases, statistically valid conclusions cannot be drawn about differences in results between residence types

Still, we provide this information for states' internal purposes. It should not be used to compare one state with another.

To protect people's privacy, we do not show the data when 20 or fewer people from a state or residence type responded to a question (though their responses are included in the NCI-IDD average).

Important Note on Changes to the 2022-23 Survey Tool

NCI-IDD operates on a six-year revisions cycle to regularly ensure the current set of indicators meet the needs of state systems and reflect current needs in the field. Survey changes are guided by state managers, people with disabilities, and other experts in the field. The 2021-22 survey tool reflected changes based on this guidance and additional survey testing. Please note, any changes to the survey tool may affect comparison to previous years' data, therefore any cross-year comparison should be made with caution.
